

BUILDING WITH COB A STEP BY GUIDE

building with cob a pdf

Cob, cobb or clom (in Wales) is a natural building material made from subsoil, water, fibrous organic material (typically straw), and sometimes lime. The contents of subsoil naturally vary, and if it does not contain the right mixture it can be modified with sand or clay. Cob is fireproof, resistant to seismic activity, and although it uses low cost materials, it is very labour intensive.

Cob (material) - Wikipedia

Materials. The materials common to many types of natural building are clay and sand. When mixed with water and, usually, straw or another fiber, the mixture may form cob or adobe (clay blocks). Other materials commonly used in natural building are: earth (as rammed earth or earth bag), wood (cordwood or timber frame/post-and-beam), straw, rice-hulls, bamboo and stone.

Natural building - Wikipedia

The City of Bellingham is excited to continue progress on projects that provide public access and support the redevelopment of our historic waterfront district.
