Calculus (from Latin calculus, literally 'small pebble', used for counting and calculations, as on an abacus) is the mathematical study of continuous change, in the same way that geometry is the study of shape and algebra is the study of generalizations of arithmetic operations.. It has two major branches, differential calculus (concerning instantaneous rates of change and slopes of curves ...

Power rule. If $f(x)$ is a function such that $f'(x) = kx^n$, and is differentiable at x , then $f''(x) = nkx^{n-1}$. The power rule for integration, which states that $\int x^n dx = \frac{x^{n+1}}{n+1} + C$ for any real number $n \neq -1$, may be derived by applying the Fundamental Theorem of Calculus to the power rule for differentiation.. Proof. To start, we should choose a working definition of the value of $f'(x) = kx^n$, where x is any real number.
