The second derivative of a function $f(x)$ is usually denoted $f''(x)$. That is: $f'' = (f')'$ When using Leibniz's notation for derivatives, the second derivative of a dependent variable y with respect to an independent variable x is written $\frac{d^2y}{dx^2}$. This notation is derived from the following formula: $\frac{d}{dx} \left(\frac{dy}{dx} \right) = \frac{d^2y}{dx^2}$. Example. Given the function $f(x) = x^2$, the derivative of f is the function
