A sound reinforcement system is the combination of microphones, signal processors, amplifiers, and loudspeakers in enclosures all controlled by a mixing console that makes live or pre-recorded sounds louder and may also distribute those sounds to a larger or more distant audience. In many situations, a sound reinforcement system is also used to enhance or alter the sound of the sources on the ...

Types. Infant Car Seat (Rear-Facing only): Designed for newborns and small babies, the infant-only car seat is a small, portable seat that can only be used rear-facing. Babies usually outgrow their infant car seats by 8 or 9 months. When that happens, we recommend that parents purchase a convertible or all-in-one car seat and use it rear-facing.

A subwoofer (or sub) is a woofer, or a complete loudspeaker, which is dedicated to the reproduction of low-pitched audio frequencies known as bass and sub-bass. The typical frequency range for a subwoofer is about 20–200 Hz for consumer products, below 100 Hz for professional live sound, and below 80 Hz in THX-approved systems. Subwoofers are intended to augment the low frequency range of ...

Corvette Sound System Upgrade. For this article we inspected the insides of eight speaker/amp assemblies. The plastic speaker enclosures are date-stamped. All four of our car's originals were made in 1994 and two of those had rotted foam. The other four were NOS amplifier/speaker assemblies. Three were dated 1996 and one was dated 1997 and two of the 1996 units had rotted foam tape.
