Quiz - Equilibrium, Acids & Bases Multiple Choice Identify the letter of the choice that best completes the statement or answers the question.

Quiz - Equilibrium, Acids & Bases

CHAPTER 2 Protein Structure 31 Side Chains with Polar but Uncharged Groups Six amino acids have side chains with polar groups (FIGURE 2.4).Aspar-agine and glutamine are amide derivatives of aspartate and glutamate, respectively. Serine, threonine, and tyrosine have side chains with hydroxyl ($-OH$) groups.

SECTION Protein Structure and Function I

Unfortunately, this book can't be printed from the OpenBook. If you need to print pages from this book, we recommend downloading it as a PDF. Visit NAP.edu/10766 to get more information about this book, to buy it in print, or to download it as

5 Energy - The National Academies Press

The DNA double helix is stabilized primarily by two forces: hydrogen bonds between nucleotides and base-stacking interactions among aromatic nucleobases. In the cytosol of the cell, the conjugated pi bonds of nucleotide bases align perpendicular to the axis of the DNA molecule, minimizing their interaction with the solvation shell. The four bases found in DNA are adenine (A), cytosine (C ...

Measures of acid strength. The usual measure of the strength of an acid is its acid dissociation constant (K_a), which can be determined experimentally by titration methods. Stronger acids have a larger K_a and a smaller logarithmic constant ($pK_a = -\log K_a$) than weaker acids. The stronger an acid is, the more easily it loses a proton, H
