In industrial chemistry, black liquor is the waste product from the kraft process when digesting pulpwood into paper pulp removing lignin, hemicelluloses and other extractives from the wood to free the cellulose fibers.. The equivalent material in the sulfite process is usually called brown liquor, but the terms red liquor, thick liquor and sulfite liquor are also used.

In chemistry, the valence or valency of an element is a measure of its combining power with other atoms when it forms chemical compounds or molecules.The concept of valence developed in the second half of the 19th century and helped successfully explain the molecular structure of inorganic and organic compounds. The quest for the underlying causes of valence led to the modern theories of ...

A 100% trans butadiene polymer would be a plastic (like gutta-percha in polyisoprene), hence these blocks are sensitive to heat in terms of shear thinning. The cis configuration, (?12%), serves to break-up substantial crystallinity since it enters in a statistical pattern.

Chem1 Chemistry tutorial. Do you remember the story about the group of blind men who encountered an elephant? Each one moved his hands over a different part of the elephant's body— the trunk, an ear, or a leg— and came up with an entirely different description of the beast.

What is Chemistry all about? - Steve Lower's Web pages

1. Introduction. Nanoscience has been established recently as a new interdisciplinary science. It can be defined as a whole knowledge on fundamental properties of nano-size objects (Sergeev, 2006, Sergeev, 2003, Sergeev and Shabatina, 2008).The prefix 'nano' indicates one billionth or 10^{-9} units. The nature of this unit being determined by the word that follows.

Synthesis and applications of silver nanoparticles
