In order to produce a ZrO₂ core for a prosthetic restoration, it is necessary to use a computer-aided design/manufacturing (CAD/CAM) system that can deal with zirconia and create a fitting framework. The realization of the ZR-ceramic restorations must be conducted in a precise sequence of steps that involves both the clinician and the laboratory technician.

An overview of zirconia ceramics: Basic properties and

Clinical chemistry (also known as chemical pathology, clinical biochemistry or medical biochemistry) is the area of chemistry that is generally concerned with analysis of bodily fluids for diagnostic and therapeutic purposes. It is an applied form of biochemistry (not to be confused with medicinal chemistry, which involves basic research for drug development).
