In physics (in particular in statistical mechanics), the Maxwell–Boltzmann distribution is a particular probability distribution named after James Clerk Maxwell and Ludwig Boltzmann.. It was first defined and used for describing particle speeds in idealized gases, where the particles move freely inside a stationary container without interacting with one another, except for very brief ...

An electric field surrounds an electric charge, and exerts force on other charges in the field, attracting or repelling them. Electric field is sometimes abbreviated as E-field.Mathematically the electric field is a vector field that associates to each point in space the (electrostatic or Coulomb) force per unit of charge exerted on an infinitesimal positive test charge at rest at that point.

La media cuadrática de la velocidad de un gas es una medida de la velocidad de las partículas en un gas, la cual es una magnitud conveniente para resolver problemas mediante la teoría cinética de los gases. La misma se define como la raíz cuadrada de la velocidad cuadrática media de las moléculas del gas. Se la expresa mediante la fórmula: [1]

Il momento di inerzia

Il momento di inerzia di un corpo è funzione della sua geometria, in particolare di come è distribuita la massa al suo interno. Il momento d'inerzia nella sua forma scalare è utile per risolvere numerosi problemi, per esempio spiega perché oggetti diversi che rotolano (come sfere, cilindri o anelli) su un piano inclinato con attrito lo fanno con accelerazioni diverse.
