A computer network is a digital telecommunications network which allows nodes to share resources. In computer networks, computing devices exchange data with each other using connections between nodes. These data links are established over cable media such as wires or optic cables, or wireless media such as Wi-Fi.. Network computer devices that originate, route and terminate the data are called ...

Computer network - Wikipedia

In computer networking, a reliable protocol is a protocol which notifies the sender whether or not the delivery of data to intended recipients was successful. Reliability is a synonym for assurance, which is the term used by the ITU and ATM Forum.. Reliable protocols typically incur more overhead than unreliable protocols, and as a result, function more slowly and with less scalability.
