Searching for phrases – To search for a phrase, put it in double quotes (eg “freedom of information”). This is not necessary for a Boolean search (ie if connectors are used) but it is better to be sure. Search terms the same as connectors – If a phrase is searched for which contains a connector, the whole phrase should be put in double quotes (eg “fit and proper person”).

A database is an organized collection of data, generally stored and accessed electronically from a computer system.Where databases are more complex they are often developed using formal design and modeling techniques.. The database management system (DBMS) is the software that interacts with end users, applications, and the database itself to capture and analyze the data.

A NoSQL (originally referring to "non SQL" or "non relational") database provides a mechanism for storage and retrieval of data that is modeled in means other than the tabular relations used in relational databases. Such databases have existed since the late 1960s, but did not obtain the "NoSQL" moniker until a surge of popularity in the early 21st century, triggered by the needs of Web 2.0 ...
